Office Action Summary	Application No. 10/806,321	Applicant(s) IWASAKI ET AL.	
	Examiner Allen J. Flanigan	Art Unit 3753	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laveran in view of Saito et al.

Laveran shows a tube sheet formation with a web 12 having collars 24 provided therein; a slanted leg portion 28 connects the crest 26 of the collar to the web 12. Provided in the leg portion is a localized thinned portion A which allows movement of the collar due to differential thermal expansion.

Laveran discloses the heat exchanger to be particularly suitable for use in intercooler type heat exchangers. No corrugated fins are shown, but Saito et al. show that it is known to provide such fins in flat tube intercoolers (see Fig. 3). Thus, it would have been obvious to one of ordinary skill in the art at the time the instant invention was made to employ such fins in the heat exchanger of Laveran for their well-known advantages of improved heat transfer.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gardner shows thinned collars for joining to tube ends in a tube sheet. The remaining references show slanted regions surrounding tube collars in flat plate heat exchangers.
